

### Amendment to Claims

This listing of Claims will replace all prior versions and listings of claims in this Application.

#### Listing of Claims

Claim 1. (CURRENTLY AMENDED) A method of optical bi-direction communication between mobile communication devices, wherein each mobile communication device has data storage locations, and wherein the mobile communication device includes an optical data capture mechanism, comprising:

rendering, in one mobile communication device, data in a computer readable form;

~~determining if the rendered data can be stored in a single data file;~~

converting the rendered data to a graphic representation; and

reading and storing the graphic representation with the optical capture mechanism

of another mobile communication device.

Claim 2. (CURRENTLY AMENDED) The method of claim 1 which further includes, determining if the rendered data can be stored in a single data file, and, if so, storing the data in a single data file; and if data cannot be stored in a single data file, converting the data to plural graphic representations and storing the data in plural data files.

Claim 3. (ORIGINAL) The method of claim 1 wherein said storing includes:

capturing the graphic representation;

determining if the graphic representation is successfully captures;

decoding the graphic representation; and

storing the decoded graphic representation in the mobile communication device's

data storage location.

Claim 4. (ORIGINAL) The method of claim 3, which further includes, if the graphic representation is not successfully captured, reading the graphic representation until capture is successful.

Claim 5. (CURRENTLY AMENDED) A method of optical bi-direction communication between mobile communication devices, wherein each mobile communication device has data storage locations, and wherein the mobile communication device includes an optical data capture mechanism, comprising:

rendering, in one mobile communication device, data in a computer readable form;

determining if the rendered data can be stored in a single data file, and, if so,

storing the data in a single data file;

converting the rendered data to a graphic representation;

reading the graphic representation with the optical capture mechanism in an other mobile communication device;

capturing the graphic representation;

determining if the graphic representation is successfully captured;

decoding the graphic representation; and

storing the decoded graphic representation in the mobile communication device's data storage location.

Claim 6. (CURRENTLY AMENDED) The method of claim 5 which further

includes, if data cannot be stored in a single graphic file, converting the data to plural graphic representations and storing the data in plural data files.

Claim 7. (ORIGINAL) The method of claim 5 which further includes, if the graphic representation is not successfully captured, reading the graphic representation until capture is successful.
